

Objective

Software Engineer specializing in robust **engineering systems**, automated **release pipelines**, and **live-site reliability** as a **DRI**.

Experienced in launching frameworks for **rapid experimentation** and deploying observability tools. Adept at integrating **AI-driven solutions** to optimize workflows and deliver next-generation conversational user experiences.

Skills

- **Programming & Logic:** Java, Python, JavaScript, Data Structures & Algorithms (DSA)
- **Web & Full-Stack Development:** HTML, CSS, JavaScript, Node.js, Flask
- **Databases & Data Tools:** MySQL, SQLite, Tableau, Microsoft Excel
- **Libraries & Frameworks:** OpenCV (Computer Vision), NumPy
- **Version Control & Platforms:** Git, GitHub
- **Engineering Systems:** CI/CD Pipelines, Automation Workflows, Release Engineering, DevOps
- **AI & Data:** Generative AI, Large Language Models (LLMs), Data-Driven Analysis, A/B Testing / Experimentation Frameworks
- **Operations:** Live-Site Operations, System Monitoring, Observability, Telemetry
- **Functional:** Software Development, Automated System Design, Problem Solving, OMR Evaluation

Technical Projects & Experience

RAKSHANET | SMART WOMEN SAFETY SYSTEM

- Engineered a MERN stack application on with a real-me SOS trigger and automated emergency communication
- Architected a "handshake" process using WhatsApp and Telegram APIs to automate guardian alerts and live location on sharing.
- Developed a 5-second safety countdown and "Cancel SOS" logic to minimize false alarms and improve system reliability.
- Integrated **Firestore Google Auth** for secure access and utilized **MongoDB** to maintain persistent SOS event records.
- Implemented Geolocation on APIs to instantly fetch and broadcast precise GPS coordinates via a Google Maps interface.

AI-CODE-REVIEWER | SPRING-BOOT

- Architected a full-stack automated code reviewer that scans code payloads for security risks (SQL injection) and performance loops in real time.
- Developed a responsive dark-mode UI using **React**, **Tailwind v4**, and **Recharts** to transform raw analysis into interactive metric graphs.
- Orchestrated data flows via a **Java Spring Boot** REST API, communicating with a local **Ollama (Qwen2.5-Coder 1.5B)** engine.
- Applied strict prompt engineering to force structured JSON outputs from the LLM, and successfully deployed the frontend onto **Vercel**.

Education

Bachelor of Technology in Information Technology |
Bhoj Reddy Engineering College (BRECW), Hyderabad | CGPA: 8.0/10

SEP 2023 – MAY 2027
